

## Abstract of Disclosure

[0006] The Strainer Drainer/Colander Caddy is a means of elevating strainers/colanders (either in the form of removable/detachable/foldable/collapsible legs or base or as a separate universal fitting device) in a stable fashion, built using either food grade or non-food grade materials, while providing drainage for strainers/colanders in order to minimize the risk of food stuffs becoming contaminated by the backup of waters in a sink/basin.
